

Findings

What the scan found in the tenant.

Needs: ✓ scan complete · ✓ baseline loaded

Based on the scan from this minute · Aug 28, 2026, 6:09 PM. [Re-scan](#) · Baseline: synthetic baseline ⓘ

1 goal in this baseline, 16 apply to this tenant. The rest are under Details with the reason each one does not apply.

Summary

IAMAI compared Contoso Pty Ltd's 1 enabled Conditional Access policy with synthetic baseline (1 policy), matching each policy on what it does. 2 of 16 security goals are in place; 1 partly (a policy covers some of the people, or a weaker control than the goal needs), 13 missing.

5 users in the directory, 4 active in the last 90 days. 1 of 5 enabled users (20%) proved MFA in the last 30 days. 1 user has no MFA method and 3 users are registered but unproven: 4 users to set up before enforcement.

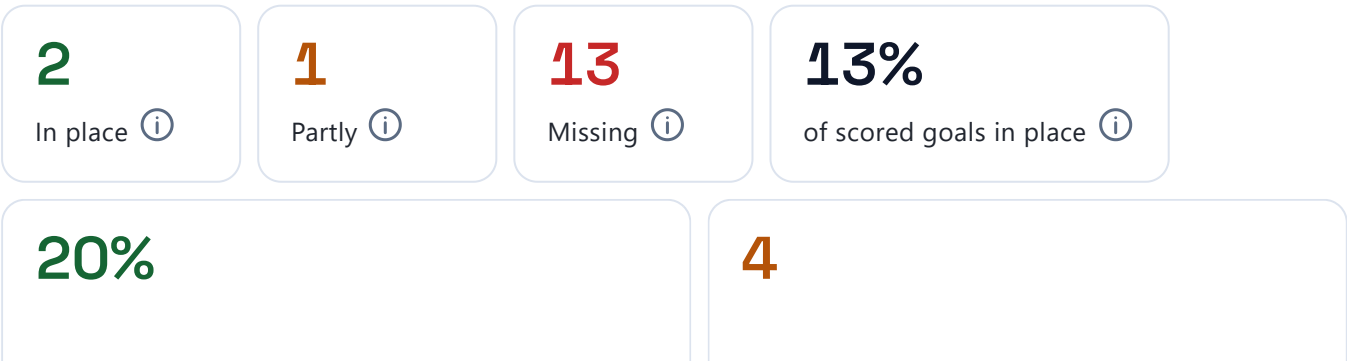

Already in place: every user satisfies MFA on every app, guests satisfy MFA.

Fix first: security-info registration requires a trusted context; device-code flow blocked; authentication transfer blocked. The Roadmap dates each one, names who it touches, and gives the exact change.

5 goals need a licence tier this tenant does not have; they are listed on the Licensing guide and left out of the score.

Since the last checkpoint (Aug 28, 2026): nothing has changed.

ⓘ IAMAI inferred no exclusion groups and 1 likely break-glass account from how the policies use them. Confirm them in [Setup](#) to remove the hedging.
